

Update State

setState () Method is used to update states.

Ex:-

```
this.state = {  
  name: "Rahul"  
}  
this.setState({name: "Jai"});
```

Update State

```
this.setState(function(state, props) {  
  return {  
  
  };  
});
```

- It accepts a function rather than an object.
- It receives the previous state as the first argument,
- The props at the time the update is applied as the second argument.
