

Passing Arguments to Event Handlers

- Arrow Function

`<button onClick={(e) => this.handleClick(id, e)}>Delete</button>`

- Bind Method

`<button onClick={this.handleClick.bind(this, id)}>Delete</button>`

Note:-

- In both cases, the *e* argument representing the React event will be passed as a second argument after the ID.
- With an arrow function, we have to pass it explicitly, but with bind any further arguments are automatically forwarded.
